J. MOI. Biol. 272:253-265(1997).

-I. FUNCTION: SERVES TO PROTECT THE VIRUS AGAINST COMPLEMENT ATTACK BY INHIBITING BOTH CLASSICAL AND ALTERNATIVE PATHWAYS OF COMPLEMENT ACTIVATION. BINDS C3B AND C4B.

-I. SIMILARITY: BELONGS TO THE SUPERFAMILY OF THE REGULATORS OF COMPLEMENT ACTIVATION (BCA).

-I. SIMILARITY: CONTAINS 4 SUSHI (SCR) REPEATS.

FUNCTION: CA(2+) DEPENDENT RECEPTOR FOR MYELOID CELLS THAT BINDS FUNCTION: CA(2+) DEPENDENT RECEPTOR FOR MYELOID CELLS THE TO CARROHYDRATES ON NEUTROPHILS AND MONCOYTES. MEDIATES THE INTERACTION OF ACTIVATED ENDOTHELIAL CELLS OR PLATELETS WITH LEUKOCYTES. THE LIGAND RECOGNIZED IS SIALYL-LEWIS X. SUBCELLULAR LOCATION: TYPE I MEMBERANE PROTEIN.

TISSUE SPECIFICITY: STORED IN THE ALPHA-GRANULES OF PLATELETS AND WELHEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL ACTIVATION BY AGONISTS, P-SELECTIN IS TRANSPORTED RAPIDLY TO THE CELL SURFACE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY: TO OTHER SELECTINS/LECAMS.

-i- FUNCTION: THIS PROTEIN RECOGNIZES C4B AND C3B FRAGMENTS THAT CONDENSE WITH CELL-SURFACE HYDROXYL OR AMINO GROUPS WHEN NASCENT C4B AND C3B ARE LOCALLY GENERATED DURING C4 AND C3 ACTIVATION. INTERPRACTION OF DAF WITH CELL-ASSOCIATED C4B AND C3B POLYPEPTIDES INTERFERES WITH THEIR ABILITY TO CATALYZE THE CONVERSION OF C2 AND FACTOR B TO ENZYMATICALLY ACTIVE C2A AND BB AND THEREBY PREVENTS THE FORMATION OF C4B2A AND C3BBB, THE AMPLIFICATION CONVERTASES OF THE COMPLEMENT CASCADE.

-i- FUNCTION: ALSO ACTS AS THE RECEPTOR FOR ECHOVIRUS 7 AND RELATED VIRUSES (ECHOVIRUSES 13, 21, 29 AND 33).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VIRUSES (ECHOVIRUSES 13, 21, 29 AND 33).

POLYMORPHISM: DAF IS RESPONSIBLE FOR THE CROMER BLOOD GROUP
SYSTEM: IT CONSISTS OF AT LEAST SEVEN HIGH-INCIDENCE (CR(A),

TC(A), DR(A), ES(A), WES(B), UMC, AND IFC) AND LOW-INCIDENCE
(TC(B), TC(C), AND WES(A)) ANTICENS THAT RESIDE ON DAF. IN THE
CROMER PHEMOTYPES DR(A-) AND INAB THERE IS REDUCED OR ABSENT
EXPRESSION OF DAF, RESPECTIVELY: IN THE CASE OF THE DR(A-)
PHEMOTYPE, A SINGLE NUCLEOTIDE SUBSTITUTION WITHIN EXON 5 ACCOUNTS
FOR TWO CHANGES: A SIMPLE AMINO ACID SUBSTITUTION THAT IS THE
BASIS OF THE ANTIGENIC VARIATION, AND AN ALTERNATIVE SPLICING
EVENT THAT UNDERLIES THE DECREASED EXPRESSION OF DAF IN THIS

Biophys. Res. Commun.
                                                                                                                                                                                                                                                                                                                              (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BCA COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S AND WITH SEROM AMYLOID P COMPONENT.

SUBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS OF 3 POSSIBLE SORTS: A 570 KD COMPLEX OF 7 ALPHA CHAINS AND 1 BET CHAIN, A 530 KD HOWOHEPTAMER OF ALPHA CHAINS OR A 570 KD COMPLEX OF 6 ALPHA CHAINS AND 1 BETA CHAIN. THE CHAIN SOR A 570 KD COMPLEX OF 6 ALPHA CHAINS AND 1 BETA CHAIN. THE CHAIN SOR A 570 KD COMPLEX OF 6 ALPHA CHAINS AND 1 BETA CHAIN. THE CHAINS OR A 570 KD COMPLEX OF 6 ALPHA CHAINS AND 1 BETA CHAIN. THE CHAINS OR A 570 KD COMPLEX OF 6 ALPHA CHAINS AND 1 BETA CHAIN. THE CHAINS OR A 570 KD COMPLEX OF 6 ALPHA CHAIN SON A DETA CHAIN. THE CHAINS OR A 570 KD COMPLEX OF 6 ALPHA CHAINS AND 1 BETA CHAIN. THE CHARACTER OF A CHAIN THE END.
                                                                                                                                                                                                                                         SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.
SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R.
CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-17 IS THE INITIATOR.
                                                                                                                                                                                                                                                                                                                TISSUE SPECIFICITY: CHYLOMICRONS IN THE PLASMA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 88242821.

Database:

Post-processing: Minimum Match 0% Listing first 45, ∦geneseqp éseq36 /summaries

Variance 114.255; scale 0.273

Statistics:

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Human partial Complement factor H protein fragment 1.

Complement factor H; tumour associated antigen; renal cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This partial protein sequence represents a region of the human tumour-associated complement factor H (CFH). This sequence is used in the identification of complement factor H related proteins and antigens isolated from clone pRBB9FH410 (see W39155). The detection of such proteins and a CFH antigens can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (BARD-) BARD DIAGNOSTIC SCI INC.

Example 6B; Fig 6B; 104pp; English.

This partial protein is found in clone pRRB9FH410 and represents a complement factor H related protein with homology to a region of the human tumour-associated complement factor H (CFH). The detection of this protein and a CFH antigen can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer agents that may modulate this antigen could be used in the manufacture of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Porcine E-selectin

                                                                                                                                                                                                                                  P-selectin gene - for regulating gene expression in engotherial cells and mega:karyocyte(s) bisclosure; Fig 1; 88pp; English.

The sequence is that of the P-selectin gene product from endothelial cells, determined from a composite of four overlapping cDNAs: lambda GMPE1-lambda GMPE4. The P-selectin gene or its fragments may be used GMPE1-lambda GMPE4. The P-selectin gene or its fragments may be used
                                                                                                                                                                             Sequence
                                                                                                                                                                               bacterial sepsis, tumour metastases, atherosclerosis, Sequence 830 AA;
                                                                                                                                                                                                            to inhibit P-selectin expression, thus controlling inflammatory and haemostatic processes in e.g. rheumatoid arthritis, ischaemic injur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    endothelium, contributes to the binding and subsequent transmigration of inflammatory cells into the graft tissue that occurs during acute cellular allograft rejection. Therefore, preventing expression of E-sel on the donor tissue may reduce the risk of rejection by modulating E-sel mediated cell adhesion. Fragments of the nucleotide sequence encoding E-sel may be used as polymerase chain reaction (PCR) primers or hybridization probes for the identification and/or isolation of the porcine E-sel gene from genomic DNA. Antisense sequences may be used to inhibit the expression of E-sel. DNA constructs may be used to introduce antisense sequences to a cell, or to inactivate the E-sel gene (e.g. knock-out constructs). Cells in which the expression of E-sel has been prevented may be used as disease models or to produce transplantation with
                                                                                                                                                                                                                                                                                                                                                          Expression control elements in the 5'- flanking region of the P-selectin gene - for regulating gene expression in endothel

The protein possesses a hydrophobic N-terminal sequence contaracteristic of a signal sequence. It is predicted that the mature contaracteristic of a signal sequence. It is predicted that the mature contaracteristic of a signal sequence. It is predicted that the including contarged the signal sequence and is followed by a hydrophobic transmembrane contends of 24 amino acids. The protein possesses a short, charged cryoplasmic tail of 32 amino acids. It is noted that the protein contains eleven N-glycosylation sites.

ELAM can be used to identify molecules which inhibit binding of cleucocytes to cells, and such binding can be inflammation can be treated) using an ELAM (or fragment), can be used to recognise MILA, ELAM ligands or their fragments, capabohydrates which bind to ELAM and antibodies which recognise ELAM.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is E-selectin (formerly known as endothelial leukocyte adhesion molecule-1; EIAM-1). E-selectin is identified by specific binding of murine monoclonal antibodies H4/18 and H18/7, developed against stimulated endothelial cells. New immunoconjugates of the invention comprise monoclonal antibody H18/7, or a fragment which binds to E-selectin conjugated to a therapeutic agent. The immunoconjugate is used to selectively target the therapeutic gent to activated endothelium expressing E-selectin, especially for treating inflammation, microbial infections, post-reperfusion injury, malignant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           or acute or chronic allograft rejection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents human endothelial leukocyte adhesion molecule-1 (ELAM-1). ELAM-1 is a membrane glycoprotein which is induced by a number of cytokines. Pathological conditions associated with the overexpression of cellular adhesion molecules, such as ELAM-1 or intracellular adhesion molecule-1 (ICAM-1), can be treated with the novel pharmaceutical composition of the invention. The composition comprises an effective amount of an ICAM-1 antisense molecule encapsulated in a lipid mixture, the lipid mixture comprising at cationic lipids. The composition is used in a method to treat pathological conditions associated with overexpression of ICAM-1, such as Alzheimer's disease, multiple sclerosis, viral hepatitis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A portion (W06881) of the complement-inhibitor, decay accelerating factor (DAF), is used in novel chimeric proteins of formula A-R1-B-R2-C, where A and C are peptides (W06875-79, W06883-90) able to bind glycosaminoglycans (esp. heparin) present on cell surfaces, R1 is a portion of DAF or membrane co-factor protein (MCC, see also W06880), R2 is DAF when R1 is MCP or MCP when R1 is DAF, and B is a peptide that may have complement inhibitor activity. The chimeric proteins (see also W06882) are directed to cell surfaces where they inhibit complement-mediated cell lysis. They are used to treat and prevent disease states in which complement plays a role, e.g. sepsis, adult respiratory distress syndrome, reperfusion injury and tisease states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 tissue damage
                                                 This protein sequence comprises human decay accelerating factor (DAF), a protein that has C3 complement inhibitor activity. Claimed retroviral vector particles express a complement inhibitor such as DAF, and are thereby protected from inactivation upon exposure to body fluids containing complement. Also claimed are: (1) a producer cell producing the vector particle; and (2) a chimeric retroviral envelope protein (see also W26326) with at least part of the N-terminal receptor-binding domain removed and replaced by a protein domain having a complement inhibitor activity. The vector is used in a claimed method for transducing cells in the presence of a body fluid containing complement, preferably ex vivo, especially the protein complement, preferably ex vivo, especially the protein containing complement, preferably ex vivo, especially the protein containing the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein acquired blood disorders by the protein contains the protein acquired blood disorders by the protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Fig. 1a-1f; 36pp; English.

A probe (given in 079865) based on the N-terminal sequence of human decay accelerating factor (DAF) was used to screen a HeLa cell lambda cDNA library. Isolated clones encoding membrane-bound DAF (mDAF) were obtained, and the full sequence of mDAF cDNA was determined (079863). The GPI signal domain of mDAF may be fused to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            02-MAY-1986; US-859107.

The probable phosphatidyllnositol derivatisation site is Cys(330). The DAF variant is useful for treating paraoxysmal nocturnal haemoglobinuria, or inflammatory or cell lytic autoimmune diseases. It may be used to ameliorate allograft rejection or autoimmune diseases. See also N70046, N70048.

Example 3; Page 8-9; 15pp; Japanese.

This sequence is the human decay accelerating factor (DAF) protein.

DAF can be used in the viral vector of the invention. The viral vector contains a factor controlling the function of a human complement protein, particularly a membrane combining type protein. The viral vector, which is stable in situ, is useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vector having complement controlling factor - useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprisesphospholipid anchor domain with heterologous polypeptide.
Disclosure; 6lpp; English.
Recombinant DAF's are useful in treatment of inflamatory or cell lytic autoimmune diseases and allograft rejection. Useful in diagnostic compositions or in affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Decay accelerating factor protein.

Database: a geneseq36

Statistics: Mean 32.240; Variance 119.188; scale 0.271

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Example 6B; Fig 6B; 104pp; English.

This partial protein is found in clone pRRB9FH410 and represents a complement factor H related protein with homology to a region of the human tumour associated complement factor H (CFH). The detection of this protein and a CFH antigen can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.
                                                                                                                                                                                             peptide

PT New C4 binding protein fusion proteins and DNA encoding them comprise assemblies of C4bp monomers linked to functional moiety, PT comprise assemblies of C4bp monomers linked to functional moiety, PT e.g. A2T, useful as delivery vehicles in diagnosis and therapy CC containing 1; Fig 1; 105pp; English.

CC This sequence was deduced from human hepatocyte (Hep G2) cDNA cobtained following PCR amplification. The protein is a monomer containing 8 SCRs. Each SCR forms a looped domain due to the presence of two intradomain disulphide bonds (only the disulphide bonds of SCR8 are labelled in the Features Table). Within each SCR, CC the first cysteine residue bonds with the third and the second cysteine residue bonds with the third and the second cysteine residue bonds with the fourth. This secondary structure is cresponsible for the conformational flexibility of the C4bp monomer. CC The invention covers fusion proteins in which the monomer sequence, is fused to the C-terminal of a protein such as a viral receptor, cell ligand, a bacterial, viral or parasitic immunogen, enzyme, cc cytokine. toxin. erg. - encoded by Vaccinia virus 35K gene
Disclosure; Figure 2A, 20pp; English.
C4b-binding protein which specifically blocks human complement cascades.
It is the deduced sequence of a 35kDa protein encoded by sequence 52-840
of the 35K gene of vaccinia virus strain WR. Note a - these sites
indicate the start of 60 amino acid tandem repeating units which have a
consensus sequence. The signal peptide sequence is not found in purified
35K protein recovered from the medium of cells infected with vaccinia
virus strain WR. A suggested use is to treat diseases due to abnormally

              retroviral vector particle expressing complement inhibitor activity properties and complement inhibitor activity properties and complement inhibitor activity properties and complement inhibitor sequence comprises the herpesvirus Saimiri secreted complement sequence comprises the herpesvirus Saimiri secreted complement complement complement complement complement and complement and complement are the protected from inactivation upon exposure to body fluids containing complement. Also claimed are: (1) a producer cell producing the vector particles and (2) a chimeric complement are recovered from the vector particles and complement complement complement complement complement inhibitor activity. The containing a complement inhibitor activity. The containing a claimed method for transducing cells in the complement activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expression control elements in the 5' flanking region of the p-selectin gene for regulating gene expression in endothelial cells and mega:karyocyte(s) Disclosure; Fig 1; 88pp; English. The sequence is that of the P-selectin gene product from endothelial cells, determined from a composite of four overlapping cDNAs: lambda GMPE1 lambda GMPE4. The P-selectin gene or its fragments may be used to inhibit P-selectin expression, thus controlling inflammatory and haemostatic processes in e.g. rheumatoid arthritis, ischaemic injury, bedreved.

Gene sequences for 3 complement regulatory proteins encoded within the genome of herpesvirus Saimiri (HYS) are disclosed, i.e. membrane complement control protein homolog (mCCPH) (Q66956), secreted complement control protein homolog (seCPH) (Q66957) and HYS-15 (Q66958). mCCPH and sCCPH share substantial homology with the human complement inhibitory proteins factor H, CD35, CD46, CD55 and C4bp, which inhibit C3 convertase activity in the complement cascade. The gene sequences and corresponding proteins (R55792-94) can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New complement regulatory proteins of Herpes virus Saimiri - are used to inhibit complement-mediated lysis in treating immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sCCPH; secreted complement control protein homolog; mCCPH; membrane complement control protein homolog; HVS-15;
